

DC3 EventStage Policy Design

updated: Feb 11, 2009

EventStage Policy File Components

1. RunMode:
 - ◆ type: string
 - ◆ allowed values: "preprocess", "postprocess"
 - ◆ description: specifies when the event should be published.
2. keysToPublish:
 - ◆ type: string array
 - ◆ description: list of <eventName>=<clipboardKey> pairs. <eventName> is name of the event that will be published. The content of that event is the `PropertySet` pulled from the clipboard using the key <clipboardKey>. If no <clipboardKey> is not present, then <eventName> will be used as the key to pull from the clipboard. The <eventName> and <clipboardKey> are separated by a "=". For example: "outgoingEvent=outgoingKey", "myEventName"

Sample EventStage Policy File

```
keysToPublish: "outgoingEvent=outgoingKey", "anotherEvent "  
RunMode: "postprocess"
```
